[illegible]

Diagram illustrating the distribution of 1000 people across 1000 houses, showing the relationship between the number of houses, the number of people, and the distance between houses.

The diagram is divided into four horizontal sections, each representing a different scenario:

- Top Section:** Shows 1000 small squares representing houses. The number of people (represented by small squares) is 1000. The distance between houses is 1000km.
- Second Section:** Shows 1000 small squares representing houses. The number of people is 1000. The distance between houses is 500km.
- Third Section:** Shows 1000 small squares representing houses. The number of people is 1000. The distance between houses is 100km.
- Bottom Section:** Shows 1000 small squares representing houses. The number of people is 1000. The distance between houses is 1000km.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group (C) and the experimental group (E). The control group (C) was divided into two subgroups: the control group (C) and the control group (C). The experimental group (E) was divided into two subgroups: the experimental group (E) and the experimental group (E).
